EMOS GoSmart products

Optimum price/ quality ratio

With the affordable prices and excellent quality of EMOS GoSmart products, the smart home system becomes accessible to everyone. You can easily create your smart home with them without complicated renovation and installation of equipment.

WIDE RANGE
Dozens of EMOS GoSmart products are developed together with the world's leading manufacturers industry leaders.

OPTIMAL PRICE AND QUALITY
EMOS GoSmart products are subject to quality control directly at the manufacturer and in our laboratory.

THE ONLY MOBILE APP
The EMOS GoSmart app allows you to control your device via your mobile device from anywhere.

TECHNICAL SUPPORT
We will provide you with technical support and help you get your EMOS GoSmart products up and running.
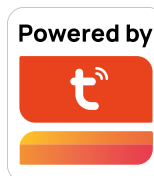

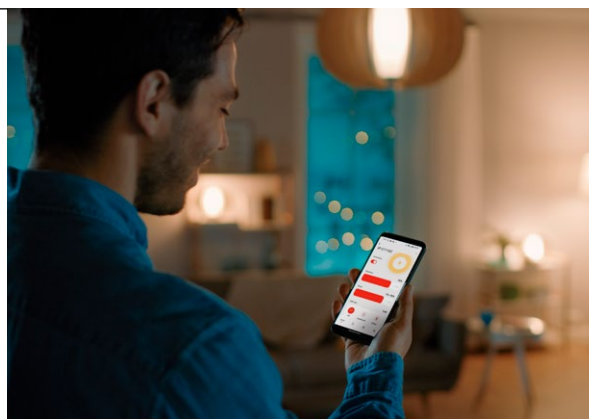

COMPATIBILITY AND EXPANDABILITY
Expand your smart home with EMOS GoSmart products and thousands of other TUYA- compatible products.

Advanced technology

EMOS GoSmart products communicate over a Wi-Fi network, Bluetooth or ZigBee communication protocols.

You can even use voice control with their compatibility with Amazon Alexa and Google Assistant.

WiFi · ZigBee 3.0 · BLE · Works with Amazon Alexa Google Assistant

Data security and compatibility

Powered by Tuya

System priorities EMOS GoSmart

The foundation of the EMOS GoSmart system is the TUYA global platform. This platform meets the most demanding security requirements and, using encrypted communication, allows the individual devices in a smart home to be connected while maintaining compatibility and ease of use.

Renowned brands that have chosen **the TUYA platform** for their smart devices include **HAMA, LIDL, LEDVANCE, PHILIPS** and many others.

EMOS GoSmart app

Full localisation and ease of use

The EMOS GoSmart app makes it easy to control all your smart home devices via your **Android or iOS** mobile phone or tablet. Thanks to the perfect localisation, you can communicate with it in your native language.

Download on the **App Store**

GET IT ON **Google Play**

Smart control of your home
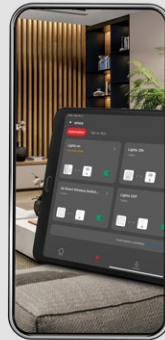

| Smart control of your home | Control multiple device | Instant connection from anywhere | Create and use intelligent scenerios | Share with your family in one click |

Without complicated settings, **the EMOS GoSmart app** gives you an up-to-date overview of what's happening in your home and lets you conveniently control all your smart devices remotely.

FULL LOCALISATION	**EASY TO USE**	**CLEVER SCENARIOS**	**DEVICE MANAGEMENT**	**SMART ALERTS**
With full localisation, you'll be up and running with the app. You can communicate in your native language.	You don't have to worry about complicated app control. Anyone can use it	Let your products work together with smart scenarios.	All smart home devices can be controlled with the app from anywhere.	The app alerts you to what's happening in your home with notifications.

EMOS GoSmart is here to make your life more pleasant, safe and convenient.

EMOS GoSmart 2.0

Gateway to new possibilities

Introducing an evolution in the control of your EMOS GoSmart smart products. The new version of the EMOS GoSmart 2.0 app brings with it not only improvements to the user interface, but also several new features for even easier and more comprehensive control.

Complete app redesign

You'll notice a fresh and improved color scheme, an updated pairing list, and many other enhancements throughout the app. Despite these changes, the overall layout remains the same to ensure a familiar navigation experience for our long-time users.

New lighting scenes

We've introduced a new feature in the GoSmart app called „Lighting" that allows you to set up scenes and automations specifically for lighting. With this feature, you can now group Wi-Fi and ZigBee lights, among others. You can also set specific color codes for your lights and enjoy predefined scenes e.g. smooth color changes, party mode, movie modes etc.
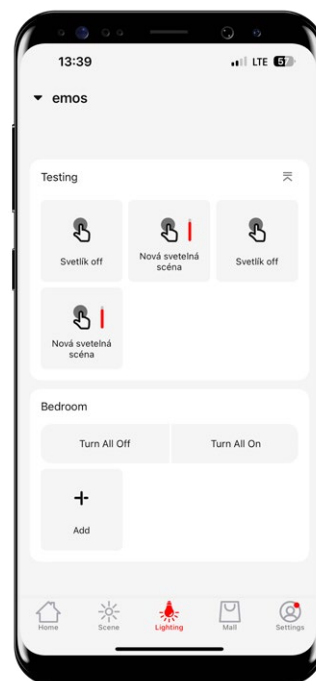

Adaptation to tablets and Apple watch

The app update also brings with it optimization in controlling GoSmart products with tablets and also Apple Watch for even more convenience and flexibility in managing your smart home.

GPS Triggered automations

Now you have the ability to create automations based on geographic location. For example, when you arrive near your house, you can set the gate to open automatically or the lights to turn on. We understand that this feature may raise privacy and „tracking" concerns for some of you. That's why

it's important to note that both iOS and Android location tracking works exclusively through official Apple and Google maps and does not transmit data elsewhere. In addition, the entire app is on official Microsoft and Amazon cloud servers and user data is stored according to security protocols.
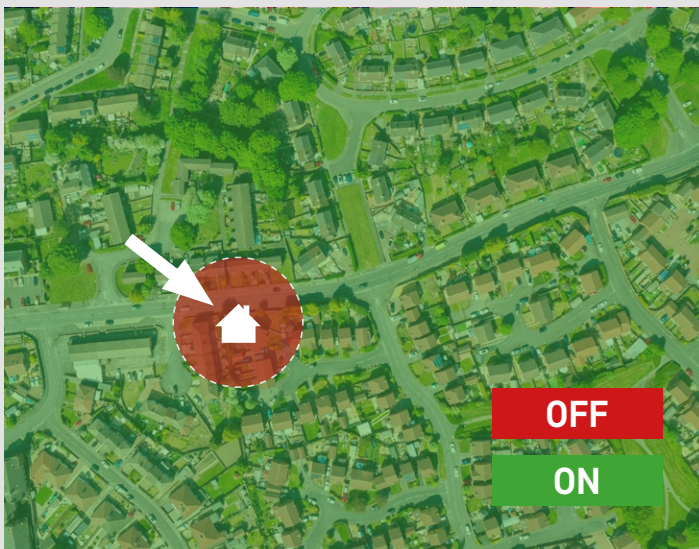

Dark mode, widgets, guides and tutorials in the app

You can now choose between a dark or light scheme throughout the app. With widgets, you'll have quick access to everything you need without having to open the app. And tutorials for all products can now be found directly in the app, so you don't have to visit our website to download them. This makes managing your smart home devices really easy.
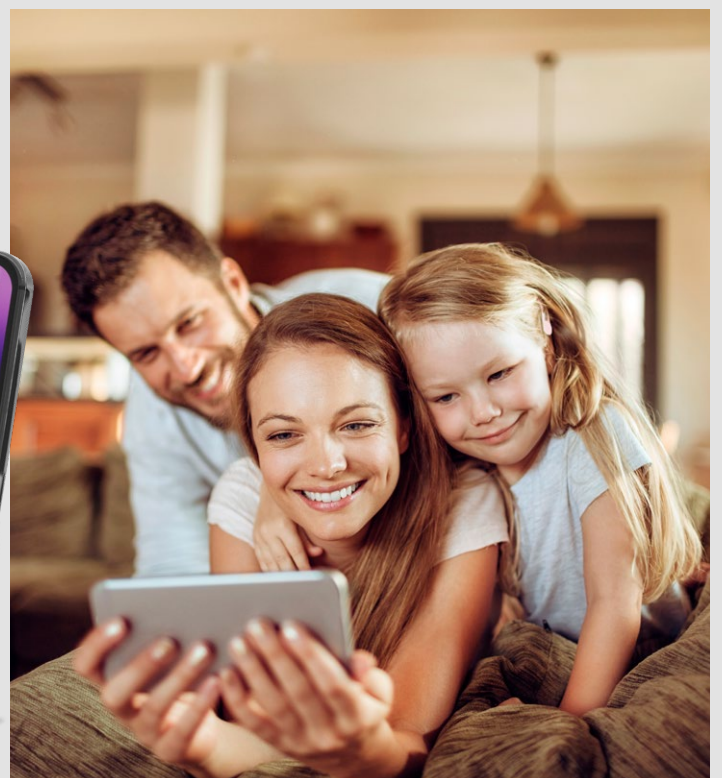

Wi-Fi protocol

The Wi-Fi protocol connects to the internet via a router that can implement remote control and monitoring. It's the ideal protocol for smart devices that need a lot of bandwidth, such as security cameras, video phones and video doorbells.

Benefits

- ability to transmit both video and audio
- simpler installation and ease of use
- lower purchase price
- no need for a hub, communicates directly with the router
- support for a large number of devices

Disadvantages

- higher power consumption (demanding on small battery devices)
- potencial for signal interference from other electrical equipment, nearby networks or physical obstructions that can lead to signal range problems
- when a large number of devices are connected, transmission speeds may be slowed
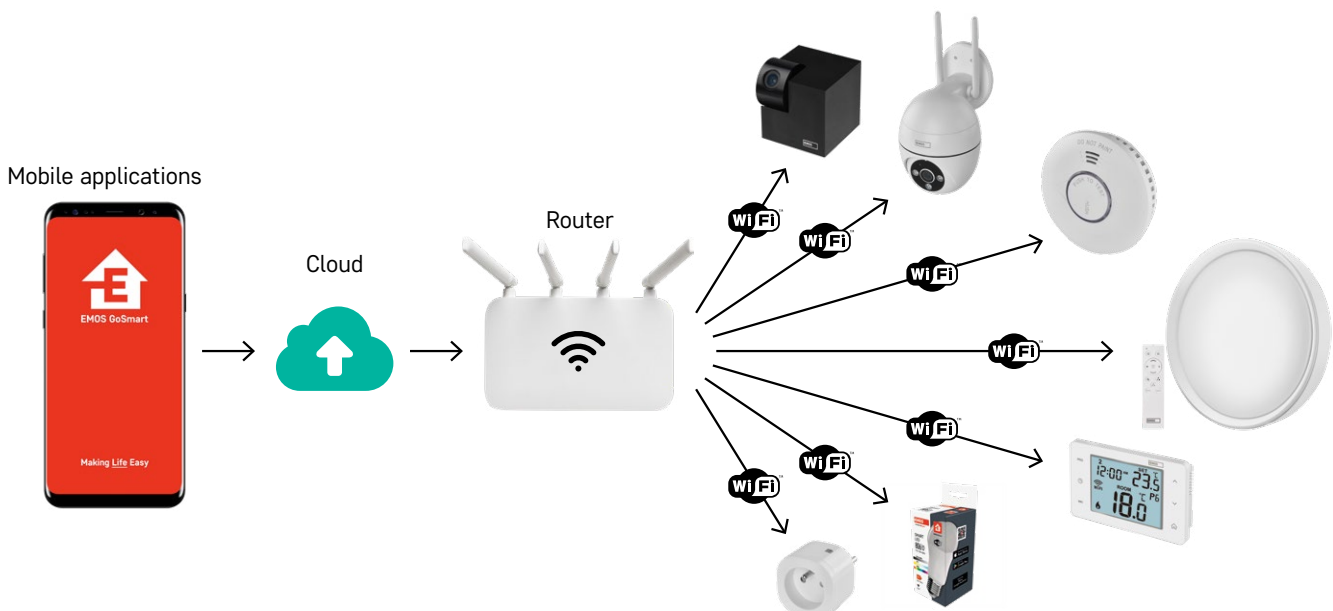

ZigBee protocol

This is a low-power, short-range wireless communication protocol that is mainly used to connect sensors, detectors and other smart home devices. The Zigbee protocol can support a large number of devices and can be connected through a network topology.

EMOS GoSmart | **ZigBee 3.0** | **Powered by** (tuya)

Benefits

- low energy consumption
- long battery life
- mesh communication capability within the network, i.e., the signal „jumps" from one device to another, allowing communication over longer distances
- support for a large number of devices in the network
- open standard - compatibility with devices from different manufacturers

Disadvantages

- higher purchase price
- need to purchase a Zigbee connection gateway (H5001)
- no video transmission is possible

Mobile applications → Cloud → Router → ZigBee gateway → (ZigBee 3.0 devices)
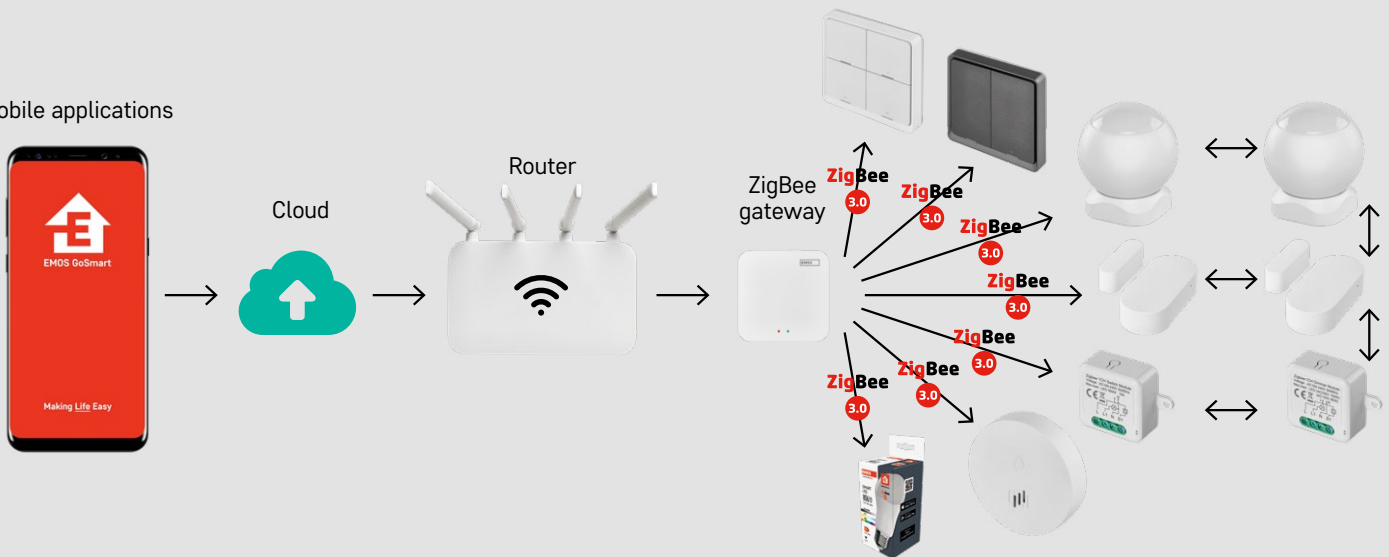

IP cameras indoor

Treat yourself to a restful night's sleep without worrying about everything you love. Smart indoor cameras keep an eye on your child, restless pet and the interior of your apartment or house when you go on holiday. Simply use them to ensure the safety of your family and your home.

Smart thermometers give you complete control over the environment in your home. The thermometers accurately measure indoor temperature and humidity, display a history of data via the EMOS GoSmart app, and are easy to just plug into your home automation. For example, when higher humidity is detected, the bathroom ventilation automatically switches on.

- measures indoor temperature and humidity
- switchable C and F degrees
- function to view temperature and humidity data history in the app
- Temperature and humidity alert function - adjustable

GoSmart Valve Controller P5640S ZigBee

A handy wirelessly operated motorised valve that is the ideal complement to smart detectors, immediately shutting off the water or gas supply when an accident is detected, preventing even more damage.

- automatic and manual control in the event of a power failure
- high power and torque
- immediate response to the detection of an accident in case of full automation
- Ideal as a complement to the GoSmart water leak detector or smoke detector
- compatible with caps that close/open with 90° rotation

- pipe diameter: 1/2'', 3/4'', 1'' a 1 1/4''
- torque: max. 5.88 Nm
- operating temperature: -10 °C to 55 °C
- IP rating: IP20
- power source: DC 12 V/1 000 mA, 1.4 m (included)
- protocol: Zigbee 3.0
- control by voice assistants

GoSmart Air Quality Monitor E30300

Increased CO_2 concentration leads to drowsiness, fatigue, decreased concentration, headaches and the unpleasant sensation of exhaled air. The GoSmart air quality monitor is the ideal assistant to ensure a comfortable and healthy environment everywhere, wherever you need it. Suitable for offices, classrooms, meeting rooms, study rooms, etc.

- overview of the current CO_2 level
- when the set CO_2 level is exceeded, an internal alarm is triggered and a notification is sent via the EMOS GoSmart app to your mobile phone
- colour animation of air quality using 3 stages
- also displays a clock and can be used as an alarm clock
- clear, permanently backlit display

- permanent backlight
- CO2 alert
- CO2 level indicator
- indoor temperature: 0 °C to +50 °C, resolution 0.1°C
- indoor humidity: 20 % to 90 % RH, resolution 1 %
- protocol: Wi-Fi

EMOS GoSmart

Light bulbs

Smart bulbs will become your key to home automation. Create scenes and take advantage of lighting settings in your home, from dimming to different colour tones of light. Create a pleasant atmosphere and give your home not only quality but also smart lighting.

BENEFIT

▶ **circadian rhythm** – changes automatically the color temperature of the light during the day to mimics the natural rhythm of sunlight and positively affects our biological clock, sleep and overall comfortable lifestyle

▶ **music mode** – the bulb synchronises with ambient music so it can flash to the beat of the music

▶ **scheduling** – setting cycles, sleep mode, light alarm

▶ **bulb grouping** – allows you to group bulbs with the same communication protocol so you don't have to control each bulb individually, e.g. create a „Kitchen" group and control the whole kitchen lighting with one click

▶ **reverse switch** – a feature that most bulbs lack, switching on and off according to the current state

▶ **preset scenes** – each bulb has a set of pre-created scenes in the app (breathing, smooth transition between colors...), can be customized according to your own preferences

▶ **switch-on memory** – a setting that determines how the bulb behaves when switched on - e.g. whether it lights up to the previous brightness, temperature or a specific colour

▶ **dimming** – all bulbs are dimmable from 100% - 10%

You can control the smart WIFI bulbs with a mobile app. The bulbs allow you to pair them into groups and set different properties, such as color and light intensity, to your liking.

- control via mobile phone app
- possibility to pair multiple bulbs in groups
- possibility of dimming and changing the colour of the light
- true-to-life RGB colour rendering

Scenic Controls

Control multiple home electrical devices or lights at once with a single button. With this sophisticated type of switch, you can program different scenes or light effect settings and then simply activate them.

Powered by

ZigBee 3.0

Works with Alexa, Google Assistant

Download on the App Store

GET IT ON Google Play

How do they work?

You connect the Scenic Switches to other smart home devices using a ZigBee gateway connected to your home WIFI network. You can then set up individual scenes using the EMOS GoSmart mobile app.

You can set a special function for each of the three button positions. Has the sun started to shine and the outside temperature has risen? At the touch of a button, you can switch off the room lights, pull down the roller blinds and activate the humidifier all at once.

Small size and big effect. These are our switching and dimming modules that allow you to control the lighting in your home with a mobile app. You can set the intensity of the lights as well as the time they are switched on or off.

- connection via ZigBee or WI-Fi protocol
- variants for zero and non-zero conductor at the point of connection
- 1 or 2-channel module, which you can choose depending on which switch you want to turn into a smart switch (single switch/ double switch)
- control manually, with the EMOS GoSmart mobile app or with the Amazon Alexa and Google Assistant voice assistants

Easy installation
